

Global Service Point: Administrator Console Operations Guide

Welcome to the **Global Service Point (GSP) Admin Console** guide. This document serves as your complete operational handbook to manage customer inquiries, Meta training leads, service catalogs, partnered brands, customer testimonials, and CMS website details securely.

1. Access & Credentials

Your administrator dashboard is secured with JWT (JSON Web Tokens) encryption and restricted only to verified personnel.

- **Console URL:** <https://globalservicepoint.com/admin/login>
- **Default Credentials:**
 - **Email:** admin@globalservicepoint.com
 - **Password:** Admin@1234

WARNING

Do not share these credentials. Anyone with access to the Admin Portal can delete customer entries, modify service catalogs, or change the contact details shown on the website.

2. Dashboard Hub

Once logged in, the first view is the **Dashboard**, which provides a high-level visual summary of your business analytics:

- **Total Leads & Inquiries:** Active counters of new inquiries from standard customers and Training Academy prospects.
 - **Service Catalog Size:** Counters of active service categories and service listings.
 - **Partnered Brands:** Total count of active brands supported (LG, Samsung, Kent, etc.).
-

3. Training Center Leads (New B2C Meta Campaigns)

This workspace collects inquiries submitted from the **Training Center Landing Page** (/training/landingpage) which is synced with your Meta (Facebook & Instagram) ad campaigns.

Key Operations:

1. **Search Bar:** Search for prospects instantly by typing their **Name**, **Phone Number**, or **City**.
2. **Date Range Filter:** Filter leads by their submission dates using the **Start Date** and **End Date** inputs.
3. **Pagination:** Browse entries easily via pagination buttons (Previous / Next) to maintain dashboard speed even with thousands of leads.

Column	Description
Lead ID	Unique system identifier for tracking.
Student Name	Full name of the candidate.
Phone Number	Contact number to callback.
City Location	Candidate's hometown (e.g., Gadag).
Submitted Date & Time	The exact date and local time of submission.

4. Customer Inquiries Manager

This section displays service request callbacks submitted from the main site contact forms:

- **Search & Filters:** Search inquiries by name or phone, or filter requests by specific service categories.
- **Excel/CSV Export:** Click the **Export Excel/CSV** button to instantly compile and download a spreadsheet (.csv) of all matching inquiries.
- **Actions:** Click the **Red Trash Icon** to permanently remove spam or old resolved inquiries from the database.

5. Services & Categories Editor

Add, edit, or delete items in your catalog, which dynamically syncs with the frontend website.

Managing Categories:

- Create new categories (e.g., "Home Appliances", "Water Solutions") with descriptive SEO slugs.
- Manage sorting order to define which categories display first on the website.

Managing Services:

- Add specific services under categories (e.g., "Air Conditioner (AC)" under "Home Appliances").
- Customize search tags, features list, customer benefits, and SEO metadata fields (Meta Title, Meta Description) to rank higher on Google search results in the Gadag region.

6. Brands & Testimonials Manager

Partnered Brands:

- Manage the list of home appliance, solar, or water purifier brands your technicians support (LG, IFB, Exide, Kent, etc.).

- Attach descriptive logos to build customer trust.

Testimonials:

- Create, modify, or remove customer testimonials and reviews.
- Toggle active ratings (1 to 5 stars) to display real positive feedback on the main landing page carousel.

7. CMS Content Editor (Zero-Code Edits)

The CMS editor allows you to change key texts and contacts across the entire website instantly without writing code:

Section	Editable Content Elements
Header	Logo title text, Primary Support Phone Number, Corporate Email.
Footer	Corporate About paragraph, Office Address, Business Working Hours.
Hero Area	Primary Banner Title, Subtitles, CTA Call Button Text, Banner carousel image links.
About Us	Core values list (Integrity, Expertise, etc.), Mission statement, free re-inspection guarantee text.
Why Choose Us	Features, benefits, and local trust badges.

8. Server Security & Service Maintenance

Both your Express API server and Next.js frontend are managed on the VPS by a process manager daemon (PM2) that runs continuously.

If you ever need to perform manual reboots or check console logs, log into your server via SSH (ssh root@187.127.136.75) and run these console shortcuts:

```
bash
```

```
# Check status of both services
```

```
pm2 status
```

```
# Restart frontend or backend server
```

```
pm2 restart gsp-frontend
```

```
pm2 restart gsp-backend
```

```
# View real-time console log streams
```

```
pm2 logs
```
